

It is recommended that you clean your septic system filter at least once a year. **Here are the**

5 benefits of a clean filter

1

Prevents Clogs

The filter prevents solids and scum from clogging your drain field. If it becomes clogged, it can't do its job properly.

2

Improves Efficiency

A clean filter helps your septic system run more efficiently.

3

Reduces Maintenance Costs

You can avoid costly repairs down the road by keeping your septic system running smoothly.

4

Protects the Environment

A well-functioning septic system is important for protecting our waterways from pollution. *This is especially important in Florida since the aquifer is one of our primary sources of drinking water!*

5

Increases Longevity

Regular maintenance can help extend the life of your septic system.
